L7A2

The unique L7A2 now replaces the well-established L7A. The design is similar, however the L7A2 is around half the length of the earlier light. The L7A2 can be supplied with a new, shorter receptacle for permanent mounting into the foam material of the inherently buoyant lifejacket, or it can be retrofitted into the existing L7A receptacle.

L6

The L6 is a small, compact and robust flashing Lifejacket light fully meeting the latest stringent IMO SOLAS requirements. The L6 is a manually activated, one piece light. It is operated by a simple pull ring that is easy to use even with gloved hands or in adverse conditions.

L6A

The L6A is very similar to the manual L6, but it is an automatically activated light. It uses a lead to ensure the light comes on in the water and that lead allows the light to be switched off if required.

The L6, L6A and L7A2 all utilise the latest electronic circuitry that ensures the light flashes at between 50 -70 times per minute. The L6 and the L6A are both supplied with a unique mounting clip to assist easy fixing to a wide range of lifejackets.

Please note that intrinsically safe versions of the L6 and L6A are now available. These new Lights are known as L6-Ex and L6A-Ex and full details can be found in the intrinsically safe section of our web site
